DETAILED ACTION

This Office Action is in response to the amendment filed 15 October 2007.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-9 and 11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hamada (U.S. Publication 2003/0000930).

In re claim 1, Hamada discloses a laser device (Fig. 4c) that contains a non-metallic substrate (11), an electrically conducting film (12) deposited on substrate, wherein the film is a metallic alloy other than Cr-alloy when substrate is Ge, wherein apparatus does not contain a p-n junction or a pin junction, wherein a junction of film and substrate forms a plane, wherein the current flow within the film is substantially parallel to the plane, wherein substrate consists essentially of a substrate material (Ge). Hamada discloses all the limitations except for there being a metasable bond with the film that would be formed by deposition in at least a high vacuum environment. This limitation is a process limitation in regards to how the metasable bond is formed with the film.

Art Unit: 2822

A "product by process" claim is directed to the product per se, no matter how actually made, In re Hirao and Sato et al., 190 USPQ 15 at 17 (CCPA 1976) (footnote 3). See also In re Brown and Saffer, 173 USPQ 685 (CCPA 1972): In re Luck and Gainer, 177 USPQ 523 (CCPA 1973); In re Fessmann, 180 USPQ 324 (CCPA 1974); and In re Marosi et al., 218 USPQ 289 (CAFC 1983) final product per se which must be determined in a "product by, all of" claim, and not the patentability of the process, and that an old or obvious product, whether claimed in "product by process" claims or not. Note that Applicant has the burden of proof in such cases, as the above caselaw makes clear. Even though product –by [-] process claims are limited by and defined by the process, determination of patentability is based upon the product itself. The patentability of a product does not depend on its method of production. If the product in product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product is made by a different process." In re Thorpe, 227 USPQ 964, 966 (Fed. Cir. 1985)(citations omitted)."

In re claim 2, the substrate material is a non-metallic element (Ge). (Page 2, paragraph 0027)

In re claims 3 and 6, the film is a material consisting of copper (Cu). (Page 2, paragraph 0032)

In re claims 4 and 7, the film material is Ni. (Page2, paragraph 0032)

In re claim 5, an overlayer (13) on the conducting film, wherein the overlayer is Ge. (Page 2, paragraph 0032)

Art Unit: 2822

In re claims 8-9, Hamada discloses all the limitations except for the thickness of the substrate and the film and the electrical resistance of the film. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the desired thickness of the substrate and the film and the electrical resistance of the film, since it has been held that where the general condition of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233. (1955)

In re claims 11-13, Hamada discloses the claimed invention except for the vacuum environment has a base pressure of a certain value. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the vacuum environment to have a base pressure of a certain value, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F. 2d 272, 205 USPQ 215. (1980)

Response to Arguments

Applicant's arguments with respect to claims 1-13 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Art Unit: 2822

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kiesha L. Rose whose telephone number is 571-272-1844. The examiner can normally be reached on T-F 8:30-6:00 off Mondays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Zandra Smith can be reached on 571-272-2429. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
